

Invest Smart Frontend Web

Prerequisites

- Node [Node \(LTS\)](#)
- VS Code is Preferable
- Git bash is also preferable

To Run

- In your terminal: run `npm install` or `yarn` - to install all the project's dependencies.
- create `.env` file and copy the contents from `env.example`.
- Inside `.env` change the value of `VITE_HOST_URL` to equate to the url from your server. which can be **ngrok** or **localhost**.
- NB! Use **ngrok url** if you're not the one running the server.
- In your terminal: run `npm run web` or `yarn web`.
- Open your browser to the running port: [localhost login screen](#)

How to setup git

Download Git Bash here [Git Bash Windows](#) NB! Change to the OS you're using Read more on this article on how to setup: [Installing and Configuring Git for the First Time](#)
